

# Ninja – Stock analysis Application

- Is a stock analysis application
  - Retrieves the feed from various sources (NSE, Sentiment indicators & Currency rates)
  - Builds the portfolio strength/value for a given trade strategy

## Problems at Application

- Long time to take changes to production
- Delay in co-ordination between various development teams
- Increased demand to run the application at 'On-Premise' servers

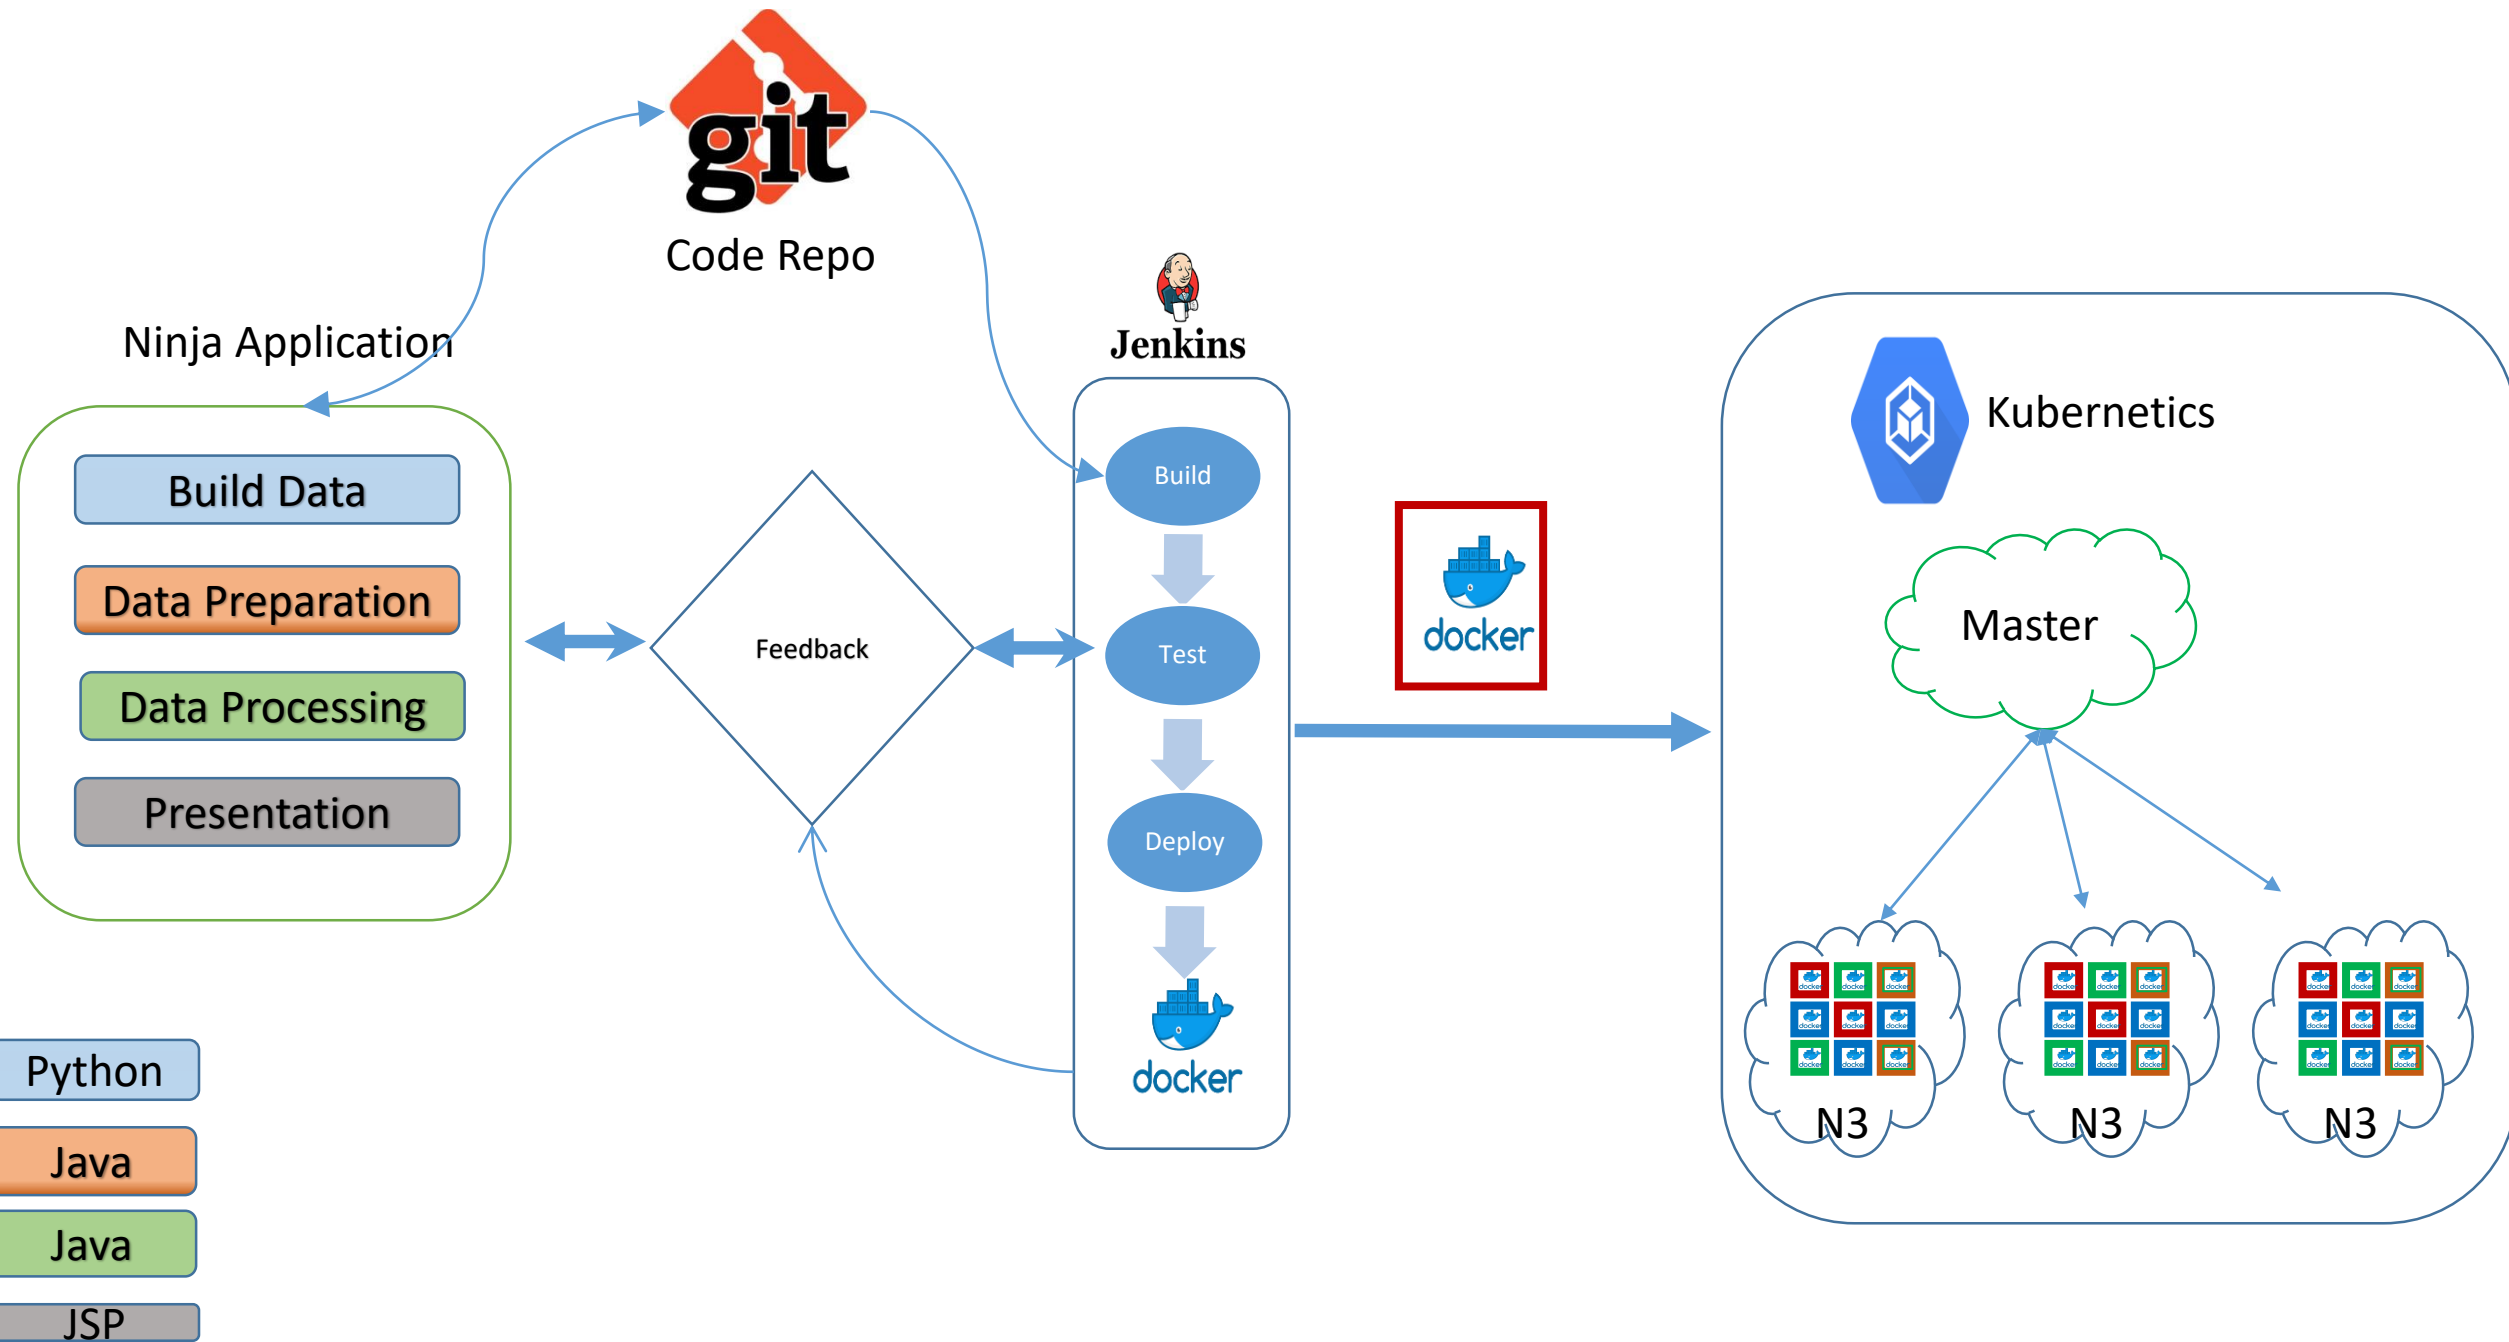

## Solution Approach

Bring all applications to one code repository

Build pipelines to reduce the timeline

Leverage containerization using Dockers run the application at 'On-Premise' servers

Leverage Kubernetes for scalability of the application

Presentation

JSP code  
presents th  
data

## Kubernetes Clusters
